

Glovia Reporting & Documents

Visibility, flexibility and control for discrete manufacturers

Easy to integrate, deploy and use, Glovia Reporting & Documents delivers a simplified Business Intelligence environment that improves user adoption, enables better decision-making, and serves as an enterprise-scale foundation for performance management.

Glovia Reporting & Documents is the only Business Intelligence product to deliver the complete range of Business Intelligence capabilities: reporting, analysis, dashboards and business event management, as well as data integration, on a single, proven architecture. Glovia Reporting & Documents also delivers powerful search functionality for both Business Intelligence and Enterprise Search.

Reporting is a key capability within Glovia Business Intelligence, a single product that provides complete Business Intelligence capabilities on a proven architecture. Reporting gives you access to a complete list of self-serve report types, is adaptable to any data source, and operates from a single metadata layer for a variety of benefits such as multilingual reporting.

The BI Platform is based on a central server-concept which allows for centralized management of reports and documents. This web-based approach allows easy access whilst strict access rules can be defined on several levels of reports and document including the semantic data layer (Universes).

Multiple source data like Glovia database (Oracle, MS SQL) but also data stored in Excel, Access, etc. can be used to create Universes that can be used by authorized users. Schedules and subscriptions can be used to receive automatic reports and dashboards in the required format (including Excel and PDF) at your schedules!
